

Children can contextualise their learning through the provision of real life maths activities.

We nurture our children to become focussed, resilient learners.

Learning in Mathematics is applied across the curriculum. STEM and wider curricular links are developed in every year group.

There is challenge for all through depth of understanding rather than new content

We talk about our Maths. Key vocabulary is displayed and links are made across the curriculum. Working walls and displays in each class provide children with regular reference points.

## Maths at Lightmoor

What does it look like?

All children have access to concrete resources. We ensure that all have a conceptual understanding before developing pictorial and abstract methods of calculation

Termly tracking and summative assessment identifies individuals and groups requiring extra support.

Maths lessons ensure that all children have opportunities to access fluency, problem solving and reasoning questions.

White Rose Maths resources support our own Mid-Term plans
